 AB The interaction of different polypeptide growth factors with their cell  
 surface receptors, which are typically rich in cysteine, is modulated by  
 sulfhydryl (SH) reagents. Because the extracellular domain of both human  
 TNFRs are likewise rich in cysteine residues, we examined the effect of  
 SH reagents on these receptors in human histiocytic lymphoma U937 cells,  
 which express both p60 and p80 forms. Iodoacetamide induced  
 down-regulation of cell surface TNFRs in a dose- and time-dependent  
 manner. Down-regulation was complete at 10 mM **IAA** for 1 h at  
 37.degree.C. The decrease was minimal at 4.degree.C. The down-modulation  
 was also observed with other cell-permeable and impermeable thiol  
 reagents. The expression of other cell surface molecules such as CD3,  
 CD11b, CD23, and CD25 were not affected. **IAA** induced the  
 down-regulation of TNFR on cells of both epithelial and myeloid origin.  
 With the use of **receptor**-specific Abs, we found that the  
 kinetics of down-modulation of the p60 and p80 receptors by **IAA**  
 were very similar. We also found that down- modulation was not a result  
 of internalization but rather of the shedding of the receptors, as  
 ascertained by **receptor**-ligand cross-linking analysis,  
 immunoassay, Western blot analysis, and ligand-blot analysis. When TNFRs  
 with a molecular mass of 80 kDa disappeared from the cell surface, a  
 42-kDa polypeptide appeared in the medium. Thus, we demonstrate that SH  
 reagents down-regulate TNFRs by inducing shedding of both  
 receptors from the cell surface, most likely by activating an  
 endopeptidase that cleaves the **receptor**. |

 (in gravitropic growth regulation in plants)  
 AB Hormone regulation in gravitropic curvature, was investigated in wheat  
 coleoptile segments and isolated plasmalemma vesicles. Lateral gradients  
 of both bound (immobile) and free (transportable) **IAA** forms were  
 related to gravitropic curvature. A correlation between growth rate of  
 upper and lower parts of the gravistimulated segment and functional  
 activity of hormone-**receptor** plasmalemma systems was  
 ascertained. Thus, changes in the **IAA** basipetal transport rate  
 may **regulate** gravitropic growth responses.

L14 ANSWER 1 OF 1 USPATFULL

SUMM 2. Decreased rate of **carbohydrate** utilization in cells of the body;

DETD Step L: 1-(2-Trimethylsilylethoxy)methyl-1H-**imidazole-4-acetic acid**, ethyl ester; and 3-(2-trimethylsilylethoxy)methyl-1H-**imidazole-4-acetic acid**, ethyl ester

DETD To a solution of 383 gm (2.48 mmol) of 1H-**imidazole-4-acetic acid** ethyl ester (prepared according to the procedure of Bashkin et al; J. Org. Chem., 1990, 55, 5125-5132.) in 5 mL.

DETD Step M: 1-(2-Trimethylsilylethoxy)methyl-1H-**imidazole-4-acetic acid**, lithium salt, and 3-(2-trimethylsilylethoxy)methyl-1 H-**imidazole-4-acetic acid**, lithium salt

AB There are disclosed certain novel compounds identified as benzo-fused lactams which promote the release of growth hormone in humans and animals. This property can be utilized to promote the growth of food animals to render the production of edible meat products more efficient, and in humans, to increase the stature of those afflicted with a lack of a normal secretion of natural growth hormone. The compounds are prepared by substitution of an amino-lactam with a substituted amide function. Growth promoting compositions containing such benzo-fused lactams as the active ingredient thereof are also disclosed. ##STR1## where L is ##STR2##
